👤 SUMMARY

Full Stack Developer with 8+ years of experience building web, mobile, and desktop applications. Skilled in Java, Python, and JavaScript ecosystems including Spring Boot, Django, React, and Flutter. Proven track record of delivering scalable enterprise solutions and improving production line efficiency.

📁 EXPERIENCE

• Full Stack Developer · AvatharTech

April 2025 – Present

- Core developer of an insurance quoting and policy-issuance platform (vehicle and personal lines): Spring Boot + Vaadin backend, Next.js/React frontend
- Maintain and extend the company's core ERP (Grails) and its ecosystem, including a cross-platform Flutter POS for Windows, Android, and iOS
- Built an internal AI gateway (Spring Boot) centralizing AI model calls; contributed to a digital-pass management platform
- Ship app releases to the App Store, Play Store, and Microsoft Store (signing certificates, release management)

• Software Developer · Clickping

2023 – 2025

- Built a hotel incident-management platform (Django, Celery, Redis, MySQL) routing incident notifications directly to insurance partners, with PDF report generation (WeasyPrint)
- Developed ITRS, a ticket request system: Django REST API with CI pipelines (GitHub Actions, mypy, Ruff)
- Built an async Telegram bot (aiogram) for ticket management: create/edit/cancel/track tickets, employee shift check-in/check-out, file and location submission (Dockerized)

• Lead Developer · Alterna

2018 – 2023

- Built Fill-Click, a real-time production monitoring platform for juice/milk filling machines — React frontend, ASP.NET Core web backend, and a Spring Boot service ingesting machine/HMI data over MQTT (PostgreSQL): live sensor dashboards, alarm email notifications, preventive-maintenance life-hour tracking, and exportable production/waste/efficiency reports — improving line performance via early maintenance alerts
- Extended Fill-Click with a Flutter mobile app for machine operators, integrated with the web backend
- Developed a desktop/Android tablet utility-billing app (Flutter, ASP.NET Core backend) for mall electricity management: meter readings, consumption calculation, invoice generation with PDF rendering, pending-balance tracking, meter and contract management, multi-company support

<> PROJECTS

• Watch Insights

- Flutter companion app for a BLE smartwatch: reverse-engineered the proprietary BLE protocol (decompiled vendor SDK, BLE captures) after finding it silently uploaded ECG data to its cloud — rebuilt fully local, with live ECG waveform streaming, doctor-facing PDF export of ECG strips, and battery/charging-state inference

• Constellation

- Decentralized homelab hardware inventory and visual map in Go: one static binary per node, gossip-based sync between nodes, embedded web UI in TypeScript/React

⚙️ SKILLS

LANGUAGES

Java, Python, JavaScript, TypeScript, Dart, Go, SQL

FRAMEWORKS

Django, Spring Boot, React, Flutter, ASP.NET Core, Grails, Vaadin, Odoo

DATABASES

PostgreSQL, MySQL, Redis

TOOLS

Docker, Git, GitHub Actions, MQTT, REST/WebSocket APIs, AI-assisted development (Claude Code)

✔️ CERTIFICATIONS

Project Leader Onboarding

Odoo

Issued July 2023

EF SET English Certificate (C2 Proficient)

EF SET

🎓 EDUCATION

Computer Science Engineering

Pontificia Universidad Católica Madre y Maestra (PUCMM)

2014 – 2020
